

OSINT Analyst

Data Intelligence Division · Beirut

THE ROLE

Monitor and analyse open-source data across digital channels. Track narrative velocity, identify coordination patterns, and contribute to Layer 4 of the Convergence framework. You will work within a structured analytical production cycle that delivers intelligence products daily.

WHAT YOU WILL DO

- Conduct daily open-source monitoring across social media, news, and digital platforms
- Track narrative spread, bot activity, and sectarian discourse patterns
- Produce structured inputs for The Dispatch and Source File products
- Apply NATO-standard source grading (A1–F6) to all collected material
- Contribute to the digital intelligence layer of the Convergence methodology

WHAT WE ARE LOOKING FOR

- 1–3 years of relevant experience in OSINT, digital analysis, or intelligence work
- Fluency in Arabic and English (written and spoken)
- Familiarity with social media analysis tools and open-source investigation techniques
- Ability to distinguish signal from noise in high-volume information environments
- Analytical discipline: structured writing, source attribution, epistemic clarity

WHAT WE VALUE

We care more about how you think than where you studied. Analytical rigour over academic credentials. Intellectual honesty over confident assertions. If the evidence contradicts the hypothesis, say so. Our products ship daily. We work at the tempo of the decisions we inform.

TO APPLY

Submit your CV and a 500-word analytical note on a current development in Lebanon or the region through our application form at beirutcore.com/careers.html

The note is the filter. It tells us how you think.
